Introduction

What does it do?

This extension provides extension "Display Controller" (and "Display Controller Advanced") with a control panel for managing the debug output in the frontend.

This extension never worked in a satisfying way, mostly due to possible interferences between JS libraries. With the improved debug output introduced in displaycontroller version 1.5.0, it is also not as useful anymore. Its development was therefore discontinued.

Questions?

If you have any questions about this extension, you may want to refer to the Tesseract Project web site (<http://www.typo3-tesseract.com/>) for support and tutorials. You may also ask questions in the TYPO3 English mailing list (typo3.english).

Keeping the developer happy

If you like this extension, do not hesitate to rate it. Go the Extension Repository, search for this extension, click on its title to go to the details view, then click on the "Ratings" tab and vote (you need to be logged in). Every new vote keeps the developer ticking. So just do it!

You may also take a step back and reflect about the beauty of sharing. Think about how much you are benefiting and how much yourself is giving back to the community.

Credits

Like extension "Display Controller", this extension relies on a library called Kint to dump the debug data in the frontend. Kint is developed by Rokas Šleinius. The project is hosted at Google Code: <http://code.google.com/p/kint/>

Installation

This extension depends on extension "displaycontroller". Indeed it makes no sense without it. It also depends on jQuery and jQuery UI. These libraries can be loaded explicitly or used from your site, if already loaded. See "Configuration" below.

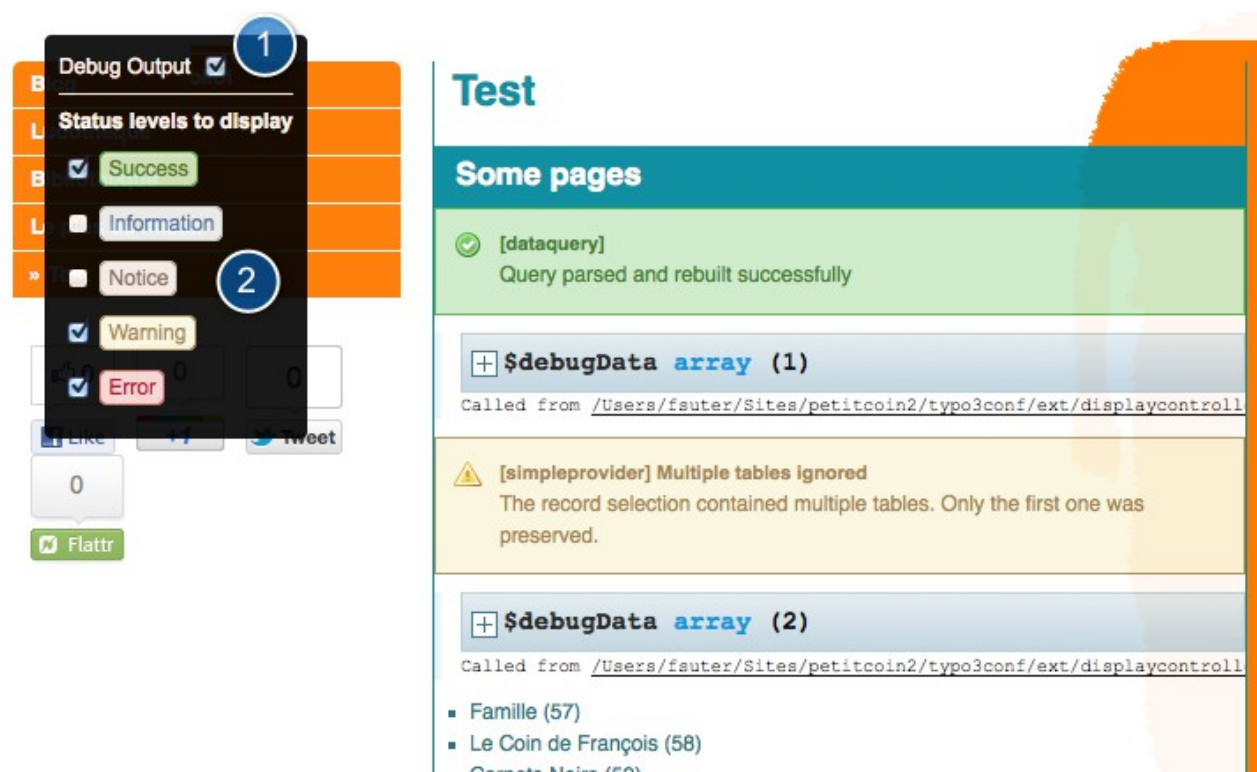

Configuration

This extension comes with two simple configuration options, to let it load the jQuery and jQuery UI libraries. If your site already loads either of these libraries, don't check the corresponding box and they won't be loaded a second time.

If your site uses a JavaScript library that conflicts with jQuery, you will unfortunately not be able to use this extension.

Users manual

Usage of this extension is very straightforward. All you need to do is click around the control panel that appears at the top of your page.

Unchecking the top checkbox **(1)** will hide all the debug output (as well as the other options of the control panel). Unchecking any of the other checkboxes **(2)** will hide the message with the corresponding severity level. Checking any box again will bring back the hidden elements.

Known problems

If you have any issues, please refer to the Tesseract Project web site (<http://www.typo3-tesseract.com/>). You may also post your problems to the TYPO3 English mailing list (typo3.english), so that others may benefit from the answers too. For bugs or feature requests, please open an entry in the extension's bug tracker on Forge (http://forge.typo3.org/projects/extension-displaycontroller_debug/issues).

To-Do list

The roadmap for the evolution of this extension can be found on Forge: http://forge.typo3.org/projects/roadmap/extension-displaycontroller_debug

For feature requests, please open a report on Forge issue tracker: http://forge.typo3.org/projects/extension-displaycontroller_debug/issues
